ECONOMIC IMPACTS OF CREDIT UNIONS IN WYOMING

Wyoming's not-for-profit, member-driven cooperative credit unions created \$375 million in economic contribution during 2022. ECONorthwest performed an independent analysis that demonstrated the gross impacts of credit unions in Wyoming. The study measured jobs, economic output, and income supported by credit unions in the state's economy. The study found that in 2022, the value of benefits to Wyoming's 336,000 credit union members was \$36 million, which, when spent in local communities supported a total gross economic output — buying power — of \$43 million.

ABOUT WYOMING CREDIT UNIONS: THE CREDIT UNION DIFFERENCE

The key difference between credit unions and other financial service providers is the not-for-profit, cooperative structure. Credit unions are owned and driven by the members who use their services. Credit unions exist solely to meet their members' financial needs. They are uniquely positioned to return direct benefits to their members such as better interest rates, lower fees, and other services that hard-working people need.

Early credit unions were formed during the Great Depression, when workers pooled their money to help their colleagues obtain credit. The Federal Credit Union Act was signed into law in 1934, to balance the nation's credit structure, providing thrift through a cooperative model. That structure — and credit unions' focus on a foundational "People Helping People" philosophy — remains intact today.

In Wyoming, 26* credit unions serve 336,000 consumers — 58% of the population — and protect 16% of the overall market share (deposits). In the United States there are 4,800 credit unions providing comprehensive financial services to more than 134 million members representing approximately 40% of the U.S. population. The number of credit union members continues to grow over time, demonstrating the value that consumers place on local, cooperative, member-owned financial services providers.

** Number of credit unions with a branch in Wyoming as of December 31, 2021. Not all are headquartered in the state.*

WYOMING ECONOMIC IMPACTS

	CREDIT UNION IMPACTS	TOTAL ECONOMIC IMPACTS
 <p>DIRECT MEMBER BENEFIT</p>	<p>\$36 MILLION benefit to members</p>	<p>\$43 MILLION total economic activity supported by member benefits</p>
 <p>COMPENSATION</p>	<p>\$68 MILLION income to credit union employees</p>	<p>\$104 MILLION total income supported by credit union operations</p>
 <p>JOBS</p>	<p>900 credit union jobs</p>	<p>1,800 total jobs supported by credit union operations</p>
 <p>ECONOMIC CONTRIBUTION</p>	<p>\$198 MILLION credit union spending and compensation</p>	<p>\$375 MILLION total spending and compensation supported by credit union operations</p>

Direct Member Benefits In 2022, the 336,000 Wyoming consumers received \$36 million in direct member benefits from their not-for-profit cooperative credit unions. Those member benefits resulted in additional household spending that supported \$43 million in total economic output.

Economic Contribution Wyoming credit unions supported \$375 million in total gross economic activity, which includes supply chain spending, wages, and direct member benefits.

Jobs and Income Credit unions in Wyoming provided 900 family wage jobs. Every credit union job supports another job in the Wyoming economy.

Rural Lifeline In rural counties, as defined by USDA's designation, about 12,000 residents are credit union members, which represents 13% of the rural population based on the USDA designation for rural counties.

Loans In addition to the \$375 million that Wyoming credit unions contributed to the state economy, credit unions have currently provided 207,000 loans outstanding to members, totaling \$3.2 billion.* Credit unions' lending to working-class consumers puts them in houses, helps them to start small businesses, and provides transportation to jobs, in addition to the spending supported through member-derived benefits.

**No economic impacts were calculated based on use of the loans in the economy. For example, we did not calculate the impact of car loans on the new and used car industries, nor the impact of mortgages on the real estate and construction industries. Loans broadly benefit the regional economy, but this study does not capture how loans benefit individual businesses throughout the economy.*

DEFINING ECONOMIC IMPACTS

ECONorthwest surveyed credit unions and obtained supplemental information to use in an economic input-output model. ECONorthwest received detailed information for 43 credit union branches located in Wyoming. In addition to survey data, the National Credit Union Administration (NCUA) 4Q 2021* call report data and Credit Union National Association (CUNA) Project Zip Code Data were used in the calculation of the economic impacts.

To evaluate the economic impacts of credit unions, ECONorthwest used IMPLAN, an input-output model which enables the user to follow expenditures from a company as they flow through the economy. The model measures direct credit union impacts (see key terminology) along with indirect (supply chain) and induced (consumer spending) impacts, then calculates economic contributions (output), employee compensation, and jobs.

CREDIT UNIONS' UNIQUE ECONOMIC IMPACT

There is a key difference between this report and a standard economic impact analysis. In credit unions' unique not-for-profit cooperative, member-driven structure, credit unions return benefits directly back to their member consumers. That direct member benefit creates another layer of economic impact. As cooperatives return benefits directly to members, these benefits support additional Main Street economic impacts.

KEY TERMINOLOGY

Credit Unions are cooperative, not-for-profit, and member owned.

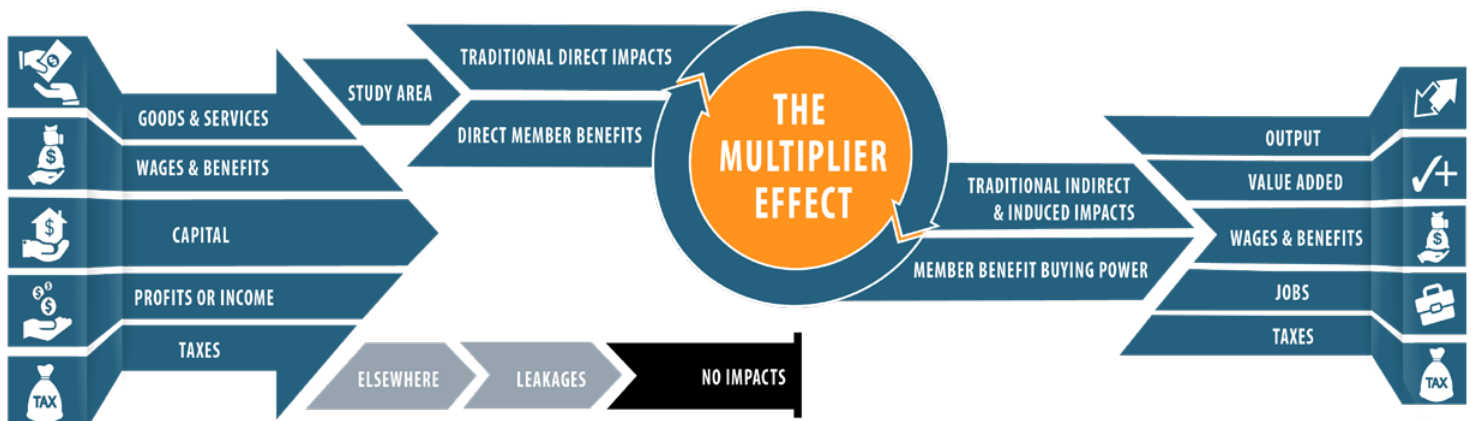

Credit Union Impacts represent the output, employment, or income change due to credit unions' own use of goods and services.

Total Economic Impacts include credit union impacts as well as indirect and induced impacts. Indirect impacts are driven by direct expenditures, which initiate a chain of other impacts in the economy, as the firms that supply goods and services to credit unions must themselves purchase supply chain goods and services. Induced impacts are supported by consumer expenditures from employees.

Direct Member Benefits are calculated by accounting for differences in not-for-profit credit union and for-profit bank pricing. The not-for-profit cooperative structure is designed to return benefits directly to the members it serves. The not-for-profit cooperative structure is designed to return direct benefits to members, such as lower account fees and better interest rates on loans.

Economic Contribution represents all sales and other operating income occurring in the study area (inclusive of supply-chain purchases and compensation of employees.)

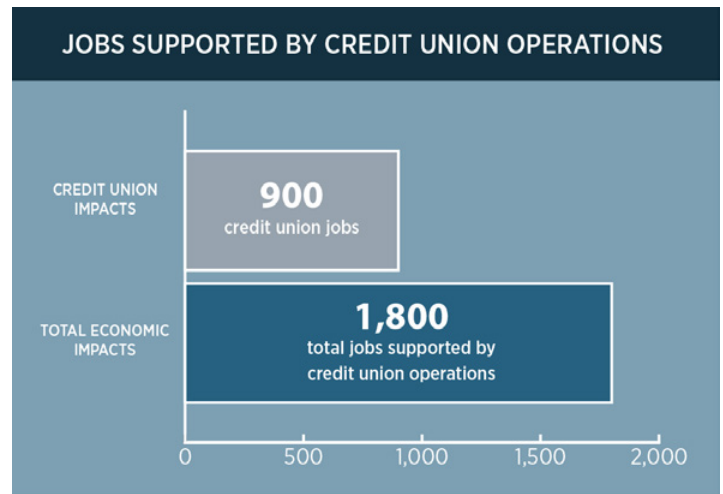

TOTAL IMPACTS

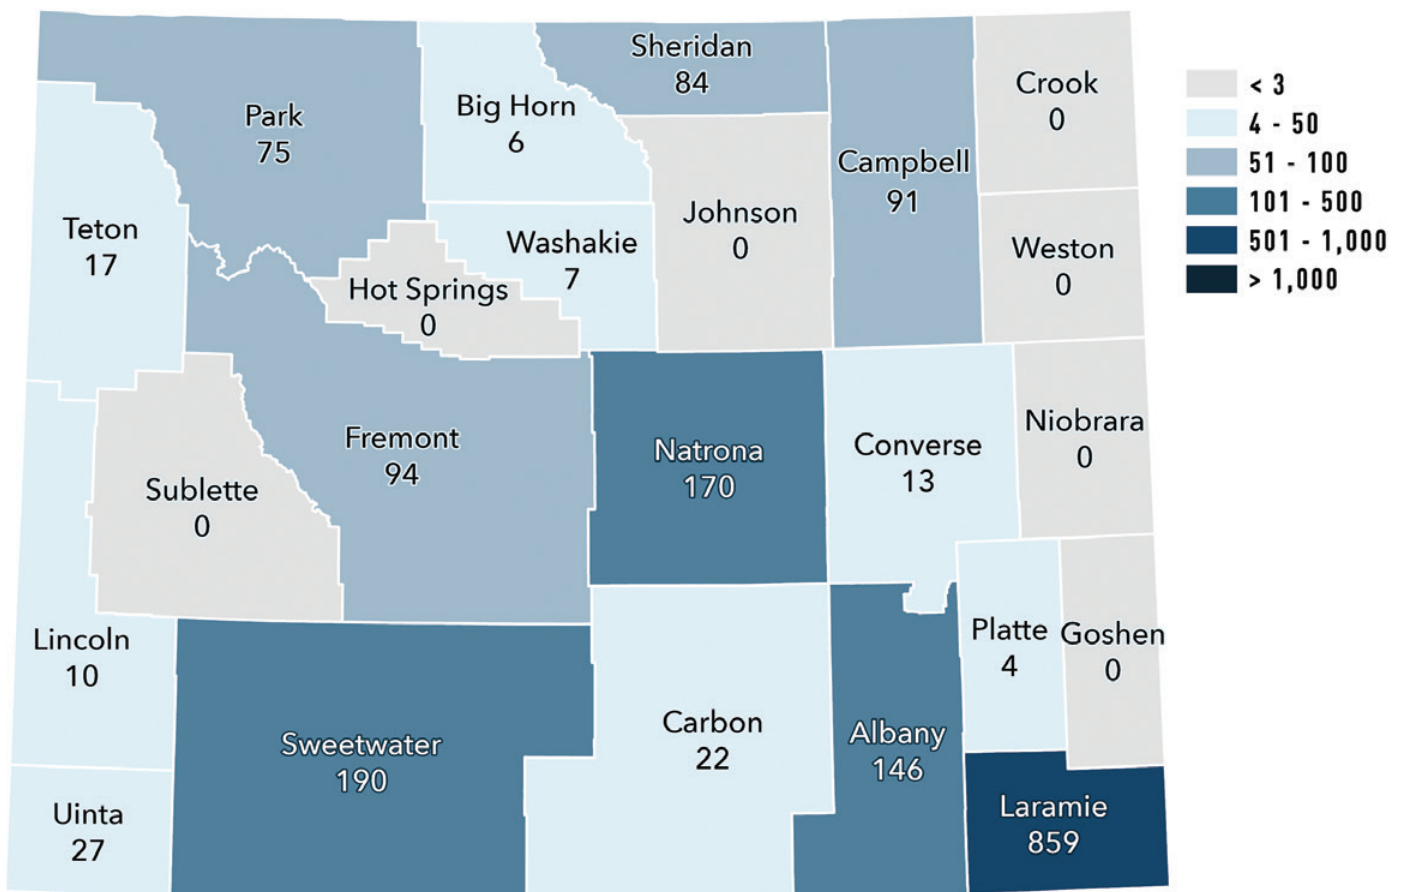

WYOMING CREDIT UNIONS' JOB IMPACTS

MULTIPLIER EFFECTS

Spending associated with operation of credit unions in Wyoming generates “multiplier” spending effects that benefit workers and business owners in other sectors of the local and state economies. Multiplier effects represent additional rounds of spending that are supported by credit union member benefits and credit union spending and wages. For example, in Wyoming the job multiplier is 2.0. This means that every direct employee at a credit union supports another job for workers in other sectors of the region’s economy.

ABOUT ECONORTHWEST

ECONorthwest specializes in the application of economic and financial principles and methods to the evaluation of public policies and investments. Incorporated in 1974, ECONorthwest has completed more than 2,500 projects for public and private clients. ECONorthwest has a staff of approximately 50 people, including offices in Portland, Seattle, Eugene, and Boise.

ECONorthwest employs the full range of analytical tools for measuring economic impacts. We maintain regional macroeconomic models, in addition to standard and econometrically augmented input-output models.

To these tools, we apply a rigorous understanding of the economic context in which specific impacts occur. This combination of robust modeling capacity and explanatory insight allows us to provide unparalleled quantitative analysis.

We have several decades of experience using the IMPLAN modeling software, conducting analysis of the zip code level through national-level models.
