2016 Credit Union Impacts
on Oregon and Washington Economies
Economic Impacts of Credit Unions in Oregon and Washington

Northwest not-for-profit, member-driven cooperative credit unions created a $7.7 billion economic impact in 2016. ECONorthwest delivered an independent analysis that analyzed the gross economic impacts of credit unions in Oregon and Washington. The study measured jobs, economic output, and income supported by not-for-profit, member-driven cooperative credit unions in the regional economy. The study also measured the direct benefits that not-for-profit, cooperative credit unions are uniquely positioned to return to their members. The study found that in 2016, the value of benefits to the Northwest’s 5.5 million credit union members was $528 million, which, when spent in local communities generated a total gross economic output—buying power—of $574 million.

About Northwest Credit Unions:
The Credit Union Difference
The key difference between credit unions and other financial services providers is the not-for-profit, cooperative structure. Credit unions are owned and driven by the members who use their services. Unlike profit-driven financial institutions which pay stockholders, credit unions exist solely to meet their members’ financial needs, and thus are uniquely positioned to return direct benefits to those members. The benefits manifest in the form of better interest rates, lower fees, and other services that hard-working Americans need.

Early credit unions were formed during the Great Depression, when workers pooled their money to help their colleagues obtain credit. The Federal Credit Union Act was signed into law in 1934, to balance the nation’s credit structure, providing thrift through a cooperative model. That structure—and credit unions’ focus on a foundational “People Helping People” philosophy—remains intact today.

In the Northwest, over 150 credit unions serve 5.5 million consumers—50% of the population—and protect 22% of the overall deposits. Nearly 6,000 credit unions in the United States provide comprehensive financial services to over 106 million member-owners, representing approximately 7 percent of the national market share. This is a key indicator of the value that consumers place on local, cooperative, member-owned financial services providers.

The Credit Union Model
Credit unions are cooperative, not-for-profit, and member owned.

About ECONorthwest
ECONorthwest specializes in the application of economic and financial principles and methods to the evaluation of public policies and investments. Incorporated in 1974, ECONorthwest has completed more than 2,500 projects for public and private clients. ECONorthwest has a staff of approximately 50 people, including offices in Portland, Seattle, Eugene, and Boise.

ECONorthwest employs the full range of analytical tools for measuring economic impacts. We maintain regional macroeconomic models, in addition to standard and econometrically augmented input-output models.

To these tools, we apply a rigorous understanding of the economic context in which specific impacts occur. This combination of robust modeling capacity and explanatory insight allows us to provide unparalleled quantitative analysis.

We have several decades of experience using the IMPLAN modeling software, conducting analysis of the zip code level through national-level models. Our expertise in this area is widely recognized in the industry. We have developed customized input-output models of regional and foreign economies.

For more information, please contact Allison Tivnon, ECONorthwest Media Relations, at 503-200-5066.
ECONorthwest surveyed Northwest not-for-profit, member-driven cooperative credit unions and obtained supplemental information to use in an input-output model. ECONorthwest received detailed information for more than 500 credit union branches. In addition to survey data, the National Credit Union Administration (NCUA) 4Q 2015 call report data and Credit Union National Association (CUNA) Project Zip Code Data were used in the calculation of the economic impacts.

To evaluate the economic impacts of credit unions, ECONorthwest used IMPLAN, an input-output model which enables the user to follow expenditures from a company as they flow through the economy.

These impacts are comprised of credit union impacts (direct) and indirect (supply chain) and induced (consumer spending) impacts and are calculated to measure economic contributions (output), employee compensation, and jobs.

Credit Unions’ Unique Economic Impact
There is a key difference between this report and a standard economic impact analysis. In the credit unions’ unique not-for-profit cooperative, member-driven structure, credit unions return benefits directly back to their member consumers. That direct member benefit creates another layer of economic impact. As cooperatives return benefits directly to members, these benefits generate additional Main Street economic impacts.

Credit Unions are cooperative, not-for-profit, and member owned.

Credit Union Impacts represent the output, employment, or income change due to credit unions’ own use of goods and services.

Total Economic Impacts include credit union impacts as well as indirect and induced impacts. Indirect impacts are driven by direct expenditures, which initiate a chain of other impacts in the economy, as the firms that supply goods and services to credit unions must themselves purchase supply chain goods and services. Induced impacts are generated as a result of consumer expenditures by employees.

Direct Member Benefits are calculated by accounting for differences in not-for-profit credit union and for-profit bank pricing. The not-for-profit cooperative structure is designed to return benefits directly to the members it serves, while a for-profit-bank structure is designed to return benefits to shareholders. Credit union members enjoy lower account fees, higher interest rates on savings and checking accounts, and lower interest rates on loans.

Economic Contribution represents all sales and other operating income occurring in the study area (inclusive of supply-chain purchases and compensation of employees.)

THE MULTIPLIER EFFECT

- Traditional Direct Impacts
- Traditional Indirect and Induced Impacts
- Direct Member Benefits
- Member Benefit Buying Power
- Leakage
- No Impacts
Direct Member Benefits. In 2016, the direct financial benefits that 5.5 million Northwest consumers received from their not-for-profit, member-driven cooperative credit unions generated $574 million in total economic impacts.

Growth. Member growth and increased direct member benefits contributed to a 50 percent increase in direct member benefit totals. In 2016, the average Northwest credit union member saved $95, up from $72 in 2014.

Economic Contribution. Credit unions generated $7.7 billion in total gross economic activity, which includes supply chain spending, wages, and direct member benefit.

$7.7 billion would be the 217th largest city measured by GDP in the United States; or approximately the size of the economy of Yakima, WA or Medford, OR.
Credit Union Economic Impacts

Jobs and Income. Credit unions in Oregon and Washington provided more than 17,000 family wage jobs. Every credit union job supports two additional jobs in the Northwest economy.

Rural Lifeline. In rural counties, about 771,413 people are credit union members, which represents 46 percent of the rural population. While many out of state, for-profit financial services institutions have closed branches in rural communities, local credit unions remain committed to serving these populations, providing services such as agricultural, home, vehicle, and small business loans that area consumers need. Credit unions are represented in 32 Washington counties and 31 Oregon counties.

Loans. In addition to the $7.7 billion that Northwest credit unions contributed to the regional economy, credit unions have currently provided 3.46 million loans outstanding to members, totaling $52.3 billion. Credit unions’ lending to working-class Northwest consumers puts them in houses, helps them to start small businesses, and provides transportation to jobs, in addition to the spending generated through member-derived benefits.

---

1 No economic impacts were calculated based on use of the loans in the economy. For example, we did not calculate the impact of car loans on the new and used car industries, nor the impact of mortgages on the real estate and construction industries. Loans broadly benefit the regional economy, but this study does not capture how loans benefit individual businesses throughout the economy.
Credit Union Growth

The results of this, the second economic impact analysis of Northwest not-for-profit, member-driven cooperative credit unions, can be compared to ECONorthwest’s 2014 study. The figures below display the growth of the industry’s economic impact in the community from 2014 to 2016.

Credit Union Members and Financial Benefit
The number of Northwest credit union members grew 13 percent from the 2014 member count estimate. To put this in perspective, the populations in Oregon and Washington grew by just 2.7 percent since 2014.

Member growth and increased direct member benefits calculated by CUNA contributed to a 50 percent increase in direct member benefit totals. In 2016, the average Northwest credit union member saved $95, up from $72 in 2014.

Economic Contribution
The economic contribution associated with the credit union industry grew by 13 percent in Oregon and Washington over the two-year period.

- **50% growth** in benefit to members
  - Member benefits increased because the per member benefit grew from $72 in 2014 to $95 in 2016, in addition to the growth in the total number of members.

- **13% growth**
  - 637,685 new members
  - (5.5 million total members)
  - Over the same period, Oregon and Washington’s populations grew by 2.7 percent.

- **13% growth**
  - Over the same period, Oregon and Washington economies’ GDP grew by 5.9 percent. Nationally, GDP rose 4.4 percent.
Credit Union Members

In Washington and Oregon, 5.5 million consumers have made the choice to join a not-for-profit, member-driven cooperative credit union. Credit unions are located across the entire Pacific Northwest, even in small, rural communities. The map below represents the credit union member presence across the Northwest.*

Washington
3.58 million members
50% of the population
554 total branch locations

Oregon
1.97 million members
49% of the population
309 total branch locations

Source: NWCUA member survey, CUNA, NCUA, and ECONorthwest calculations.
Note: Dots are randomly placed within each county, representing 100 members each.
*This potentially includes double counting of individuals who are members of more than one credit union. The number of credit unions represented are those that have members in Oregon and Washington, not the number of credit unions headquartered.
Washington Value of Member Benefits

Credit unions, as not-for-profit cooperatives, generate and return value directly to their member-owners. Credit union members receive benefits because of the cooperative, not-for-profit, member-driven structure, which produces lower fees, higher interest rates on savings and checking accounts, and lower interest rates on loans compared to for-profit bank customers. Each dot represents the relative proportion of the direct benefits that members in different counties realized annually from being a credit union member. From the direct benefits incurred, consumers will spend portions of that savings in the local economy, from which additional multiplier impacts further benefit the local economy. In Washington, the direct member benefits of $369 million generate $413 million of spending in the state.

CUNA “Membership Benefits Report,” Year-End 2015
Member benefits were calculated based on 4Q 2015 data from CUNA. The annual member benefit calculation was applied to the number of members living in each county during 4Q 2015.

$103 direct benefit per member
$369 million total direct member benefit
$413 million local spending supported by member benefit
# Washington Economic Impacts

**Direct Member Benefits.** The $369 million in direct financial benefits that 3.58 million Washington members received last year from their cooperative credit unions generated $413 million in total economic impacts. The direct member benefits are calculated by accounting for differences in not-for-profit credit union and for-profit bank pricing. Because of the cooperative structure, credit union members enjoy such things as lower account fees, higher interest rates on savings and checking accounts, and lower interest rates on loans.

**Jobs and Income.** Credit unions in Washington provided 11,215 family wage jobs. Every credit union job supports two additional jobs in the Northwest economy.

**Economic contribution.** This represents all sales and other operating income occurring in the study area (inclusive of supply chain purchases and compensation of employees). Washington credit unions generated $5.5 billion in total gross economic activity.

**Loans.** Credit unions’ lending to working-class Washingtonians puts them in houses, helps them start small businesses, and provides transportation to jobs. In 2016, there were 2.5 million loans outstanding, totalling $38.1 billion.

Washington Credit Union Job Impacts

In addition to providing family wage jobs throughout Washington, the jobs supported by credit union operations represent a meaningful share of the employment base. The map below displays the number of jobs by county that are associated with credit union operations (includes direct, plus indirect and induced jobs).

Multiplier Effects

Spending associated with operation of credit unions in the Northwest generates “multiplier” spending effects that benefit workers and business owners in other sectors of the local and state economies. Multiplier effects represent additional rounds of spending that are supported by credit union member benefits and credit union spending and wages. For example, in Washington, the job multiplier is 3.1. This means that every direct employee at a credit union supports another 2.1 jobs for workers in other sectors of the regional economy.

Oregon Value of Member Benefits

Credit unions, as not-for-profit cooperatives, generate and return value directly to their member-owners. Credit union members receive benefits because of the cooperative, not-for-profit, member-driven structure, which produces lower fees, higher interest rates on savings and checking accounts, and lower interest rates on loans compared to for-profit bank customers. Each dot represents the relative proportion of the direct benefits that members in different counties realized annually from being a credit union member. From the direct benefits incurred, consumers will spend portions of that savings in the local economy, from which additional multiplier impacts further benefit the local economy. In Oregon, the direct member benefits of $159 million generate $161 million of spending in the state.

Numbers are in millions.
